Career Objective

Passionate FullStack Developer skilled in React.js, Tailwind CSS, and modern JavaScript frameworks. Experienced in building responsive, user-centric interfaces with clean and efficient code. Dedicated to collaborating in agile teams and continuously improving technical expertise. Committed to delivering innovative and high-quality web applications that enhance user experience.

Technical & Soft Skills

Expertise: HTML, CSS, Tailwind, JavaScript, DaisyUI

Comfortable: React.js, Node.js, Express.js

Familiar: MongoDB, React Query, Stripe, Context API, Firebase, JWT, Axios

Tools: Git, GitHub, Vercel, Netlify, npm, VS Code

Soft Skills: Time Management, Communication, Adaptability & Problem-Solving.

Projects

HobbyHub (may 2025)

[Live](#) | [Client](#) | [Server](#)

HobbyHub is a comprehensive hobby management platform developed to enable users to efficiently create, discover, and join hobby groups. It facilitates meaningful connections among like-minded individuals, promotes active participation in activities, and ensures timely updates on group events—all within a secure and intuitive environment.

- **Create & Manage Hobby Groups:** Authenticated users can create, update, and delete hobby groups with fields like category, location, image, and group deadline.
- **Join & View Hobby Communities:** Users can browse all groups, view detailed group info, and join active groups — restricted based on the group's start date.
- **Authentication with Protected Routes:** Implemented secure login and registration using Firebase Auth (email/password + Google), with full route protection and toast-based feedback.

Service Share (June,2025)

[Live](#) | [Server](#) | [Client](#)

A web-based platform enabling users to post, browse, and book services, equipped with comprehensive service listing management and secure authentication through Firebase.

- **Authentication:** Implemented secure login using Firebase (email/password and Google), protected routes using JWT.
- **Full Service Lifecycle Management:** Users can add, edit, and delete their own services. Others can book services, and service owners can update booking status (pending, working, completed) — ensuring end-to-end service flow.
- **Real-Time Search, Sorting & Responsive UI:** Built an interactive and responsive interface with real-time service search, sorting by price, and dark/light theme toggle using Tailwind, DaisyUI, and React.

Event Discovery(April,2025)

[Live](#) | [github-link](#)

A modern platform for discovering upcoming events, viewing past memories, and interacting through reviews and ratings all in a secure and responsive environment.

- **Dynamic Event Management** Features a responsive slider showcasing featured events, a full list of upcoming events.
- **Secure Authentication System:** Includes Email/Password registration, Google Sign-In, update profile, and forgot password functionality for seamless access.
- **User Engagement & Extras:** Users can rate events, see dynamic titles, and explore added custom routes like About, all built with interactive feedback (React Toastify) and enhanced UX.

Education

Graduation: 2018

Bachelor of Business Administration(MBA)

World University Of Bangladesh, Dhaka,Bangladesh

Complete Web Development With Programming Hero

Year:2025

Programming Hero | Remote
